Course Objectives

The purposes of this course are to further improve your understanding of complex corporate financial reporting requirements and techniques and to continue to develop a framework for analyzing the political and economic significance of a wide variety of financial reporting issues. During the class, you will also be exposed to a selection of managerial accounting topics. You should develop an in-depth understanding of the material to which you were introduced in ECONOMICS 174. The concepts, theory, and technical details will be stressed and closely examined. Exercises, problems and cases will provide vehicles for class discussion. This course takes the perspective of a decision maker both as the user and as the preparer of financial statement information. After completion of this course you will be able to read, understand, analyze and evaluate a company’s annual report and their 10-K. You should also be able to effectively participate in many managerial decisions.
