Like Computer Games? Interested in Finance Capital? Fascinated by Codes, Puzzles and Stories? Wondering What the Future Will Bring?

Sign up for an independent study with us! The objective is to test, analyze, and evaluate the extensive Alternate Reality Game “Speculation,” designed here at Duke last year. Featuring eight modules with multiple levels in each module, “Speculation” combines game play with narratives of a near-future world, codes and ciphers with deep information about the origins of money, credit, and finance. Learn about game construction and provide input on how to improve our design. Check out the trailer at http://vimeo.com/39947942 and the url at www.speculation.net. For more information, contact Prof. Hayles as katherine.hayles@duke.edu.
